

The Community OpenORB Project

1. News

2. What is It?

This is a community fork of the open source project OpenORB (openorb.exolab.org, dog.intalio.com). The goal of this initiative is to make the evolution of the OpenORB project more transparent and to allow the community to take part in making decisions about its future.

The OpenORB software is free open source software with a BSD-like [license](#). See the files LICENSE.txt and EXOLAB.txt in each package.

3. Features

OpenORB provides a Java implementation of the [OMG](#) CORBA 2.4.2 specification.

Along with the ORB, the following OMG Services are provided:

- Concurrency Control Service
- Event Service
- Interoperable Naming Service
- Notification Service
- Persistent State Service
- Property Service
- Time Service
- Trading Service
- Transaction Service

4. Future

We are working to make OpenORB a part of the [Apache Software Foundation](#).
